➤ PROJECT WORK

TITLE: Restaurant Management System

ROLE: Developer

DURATION: February 2022

DESCRIPTION:

A restaurant management system is a type of software that has been specifically designed for use within the restaurant industry. Also known as restaurant management software, such solutions are intended to assist leaders and others in carrying out the most critical managerial tasks.

A system of this type may be a comprehensive all-in-one solution, including elements of a point-of-sale system, such as payment processing, with more complex back-end features, such as workforce management, inventory management, and a booking or reservations system. However, some restaurant management systems focus on specific areas.

Contribution:

- Involved in designing the standards required to implement this Project.
- Responsible for code development.
- Preparation of various unit test cases.
- Performed unit testing.

ENVIRONMENT: PHP MVC, MySQL.
